

Riello UPS and SYNETO together for hyperconvergence systems increasingly reliable and resilient

Riello UPS protects SYNETO's hyperconvergence and Disaster Recovery systems

Luogo, 17 February 2021. Riello UPS, a brand of the Riello Elettronica group, a world player in the production of static uninterruptible power supplies, photovoltaic inverters and Energy Storage systems, has developed a new function for the NetMan 204 network card that allows you to protect Syneto's range of virtualization, storage, sharing and Disaster Recovery services.

Thanks to the experience of its research and development team, which collaborated closely with Syneto, Riello UPS has introduced the NetMan 204 4GB network card (an accessory that allows the UPS to be connected to the LAN using main network communication protocols) with functionality that allows you to perform an orderly shutdown and restart of the virtual machines and Hyper devices of Syneto in the event of a power outage.

In this way, the UPS is able to safely shut down all the virtual machines included in the Autorestart function, making sure that the last activated virtual machine is the first to be stopped. Moreover, thanks to the new functionality it is possible to configure a desired sequence of switching on and off, all with full compatibility with SynetoOS and SynetoFileRecovery.

What are hyperconverged structures? Often the older IT infrastructures, present within the Data Centers, can burden their activities, preventing them from responding quickly to the demands of business growth. Through the IT architecture of centralization of software resources, which is obtained with hyperconvergence systems (HCI), it is possible to reduce costs, complexity and costs borne by personnel, while increasing performance.

"Hyperconverged systems transform the traditional IT operating model by enabling simple and unified resource management. For this reason, Riello UPS considered the integration of new specific features in the NetMan 204 4GB network card to be strategic for the management and control of Syneto's hyperconverged systems. With Syneto, a young and dynamic Italian company, we immediately found ourselves in harmony on how to proceed with the development of this solution" said Massimo Zampieri, Product Manager UPS Single-phase and Connectivity at Riello UPS.

"We are satisfied with the collaboration with Riello UPS, a company that shares fundamental principles with us such as those of developing services with a high level of reliability, safety and performance", says Alessandro Biagi, Marketing Manager of Syneto "I am sure that our work together will allow us to offer the market solutions capable of responding to various business needs."

The excellent results obtained from the collaboration between Riello UPS and Syneto, leading companies in their respective sectors and Made in Italy excellence, was possible thanks to the values they share, such as the reliability of the

systems they offer to their customers, safety and protection at the highest levels, but also to their particular commitment to the customer experience.

Information about Riello UPS

Riello UPS is the brand of uninterruptible power supplies for Data Centres, offices, electromedical applications, security and emergency equipment, industrial complexes, and communication systems, designed and produced by RPS S.p.A., a company based in Italy and part of the Riello Elettronica Group. With the Riello UPS brand, RPS S.p.A. is the industry leader in Italy and firmly placed among the top five companies in the world in technological research, production, sales, and assistance. The pursuit of quality, the optimization of resources and a strong drive towards technological innovation, together with seriousness, consistency, and experience, make RPS S.p.A. a company able to meet the needs of a fast-growing market. RPS S.p.A. has two production sites in Italy, 16 subsidiaries placed between Europe, the United States, the United Arab Emirates, China, India, Singapore, Vietnam and Australia, and a presence in over 85 countries worldwide, that offers a very high level of customer service.

Information about Syneto

Syneto is innovating the traditional IT infrastructure of small and medium corporate data centers, small and medium enterprises and branch / branch offices, offering cutting-edge hyper-converged infrastructures specifically designed for their needs. While traditional IT infrastructures rely on expensive and difficult-to-manage components, Syneto creates an all-in-one solution that combines the agility and affordability of the public cloud with the on-premises security and performance of the private cloud, setting the stage for a future where hybrid IT is the protagonist. Syneto takes hyper-converged infrastructures to another level with 500% higher application performance than traditional infrastructures, always-on data protection and integrated disaster recovery capabilities, which, in the event of a disaster, allow customers to restart the entire IT infrastructure in just 15 minutes.
